Subject: Northern Pass Project

Dear Ms. Monroe,

I am writing to you as a resident and a landowner here in NH. I tend not to mince words, so I'll keep this short and to the point.

The northern pass project has no business in New Hampshire, period. It does not serve the citizens of New Hampshire, it detracts from our most important asset, which is the beauty of our state, and it is fueled by disinformation and piles of corporate propaganda monies. The National Forest hardly stands a chance without the protection of conservation groups, concerned citizens, and people who know better when they are told this is a renewable source of energy. Industries are moving away from water power these days. Counties all across the nation are tearing down old dams, as they know about the negative impact on wildlife and water quality. High energy transmission towers should be a thing of the past.

As I cannot attend the actual hearings about this, I ask you to deny the northern pass altogether. Even if it is buried, we would still have roads and permanently altered landscapes in areas that are only getting smaller and smaller in terms of uninterrupted open space. Our wildlife, our mountains, our rivers, and our future generations will all be better off if we can try harder to protect ourselves from corporate greed in the name of "jobs". Everyone knows those jobs are for a very limited time, and practically nonexistent in the long term.

Please do the right thing and move forward. Deny the Northern Pass.

Sincerely,

Eugene A. Pope
