Dear Site Evaluation Committee,

I own a barber shop on Main Street in Plymouth, New Hampshire. Northern Pass has plans to rip up the newly surfaced Main Street to install an "underground" power transmission line! I feel that this proposal is their way of punishing those who want to have the line buried. The project would be ridiculous! Disruption to my business would not just be for the time of installation, but for the long term damage to business, with customers finding other barbers during our disrupted time.

Have the line buried along the Route 93 corridor and let the state and citizens collect the revenues from the transmission line.

Sincerely,

Don Turnage
