### CommenterWords

We're against NP for the following reasons:

1. NP is a foreign Corporation. We need domestic control at federal and state level of our power grid..
2. This project will scar our state with towers, relay sites (along the ROW), and be harmful to wild life.
3. This electric system is not for NH but south of us, and will provide little benefit to towns via taxes and citizens of NH.
4. Real Estate values within site of the towers will be adversely affected and property owners will be see their property values drop. This has already started as property owners along the main ROW have seen their values drop radically .
5. Hydro Quebec has told the citizens and state government more lies about this project than we can count. Jobs: How many citizens do we have to work on this project that are qualified for extremely high voltage. Plus, this work is short term. The whole subject of towers and buried lines is not clearly defined and keeps changing. We've attended state meetings in Concord and around the state. Almost all citizens who understand the facts about this project and the effects it will have on our state do not support NP.
