Three generations have lived on this property and we are next to Dummer where this line is projected to go through on towers. We moved to this location to be in the deep woods as you can tell from our Email address. We are not against this project but would like to see the entire length buried. Although it will cost more, I also know they have spent tremendous amounts of money fighting to keep most of it above ground! The projections for profit and their reported earnings each year certainly show that it would still be a profitable project! They have told outright lies and half truths from the beginning and this is most true when dealing with the rural North of our state. We humbly ask you to consider the impact and the ruthlessness this company has show and recommend that it be buried (which I am certain they will do if they have no choice contrary to their statements that they won't). Thank you for your time and consideration.
