### CommenterWords

I am opposed to the Northern Pass project in NH. Northern Pass will not only mar our scenery but will help to prolong our dependence on energy resources that are not sustainable for our environment. It also has no potential to create significant economic growth for NH, and any jobs created by it will be temporary and may not even go to NH residents. The power transmitted doesn't even go to NH homes. There is no reason to stick with Northern Pass when it has so few benefits to NH and the environment, and the people of NH do not want it.
