I oppose Northern Pass. It is not needed for the state of NH's energy needs. The main benefits of the project go to Eversource and it's investors, not the citizens of NH. And the citizens of NH are the ones who will suffer short term with construction hassles and long term with the eye sore of towers and the inevitable construction maintenance for the areas that have buried cables.

The argument that this will create jobs is short sighted. The jobs will primarily go to out of state contractors and workers who travel to work on large utility projects. Very few in state jobs will be created and maintained by this project.

The state would be far better of by focusing on energy efficiency and in-state solar energy and wind projects. Not bringing in out of state hydro that gets sold to other states and creates hardship for the citizens of NH for the benefit of Eversource and it's investors.

Thank you for your consideration.
