I do not wish to destroy our mountains and forests for power needs primarily out of our state. I am gravely concerned these poles will ruin many beautiful views and thereby decrease property values in our town.

I am employed in the tourism industry so the project will also impact my personal livelihood as vacationers avoid the area due to the construction and the loss of pristine views and forest.

If power needs to travel thru our state it should run along the 93 corridor. The surrounding properties are already contending with view destruction from the freeway. I also believe the towns that allow the power to pass thru should receive free power from Hydro-Quebec for the lease of their land.
