We live off Rte 116, the proposed underground route. The prospect of installing underground vaults every 1800ft , each the size of a school bus, would be catastrophic to many along its route. Homes will be comprised and infringed upon; water sources, septic systems threaten.

If any member of the committee has not personally toured this route, please do so. The SEC should be fully aware on how this area and families will be forever impacted. Please do the right thing, reject this project as proposed, there are better options. Thank you for taking the time to read our concern.
