### CommenterWords

I am opposed to Northern Pass Transmission project. Some have compared Northern Pass to an extension cord that crosses New Hampshire to supply electricity to the areas south of New Hampshire.

I don't see any benefits, only destruction of the environment and negative economic consequences to communities in the North Country.

The clear-cutting and construction through northern forests will cause long lasting harm to wetlands, rivers, and streams, the massive towers and high voltage lines will be an eyesore in an area that by and large relies on tourism for its livelihood.

All the claims of new jobs and economic gains by Northern Pass proponents are vastly overstated and the jobs they promise are temporary.
