Hello Ms. Monroe,

I am writing in opposition to the incomplete application of the Northern Pass. This project has never secured a completed route, and does not have the right to continue its application because it never completed it. The route is still fluid, contested at many places, and the applicant has never satisfied the requirements to secure its route.

The Northern Pass still has not addressed the people's concerns regarding the overhead towers and wires, the loss of scenic view shed, loss of citizen revenue, and the damage to sensitive environmental areas. Furthermore, the project has grossly overestimated the economic benefits to the customer base, and has deceptively grossly over-reported the number of jobs, and their economic value.

Furthermore, there are several competing transmission projects that have secured their routes with far less contention, completely eliminating the need for energy from the Northern Pass project. Because of the other routes' considerations of siting and more Truthful and transparent application, those projects have not met with the same extreme opposition as Northern Pass.

Please strongly consider these over-arching issues when the final determination is made to REJECT the Northern Pass' application.

Thank you,

Julie Moran
