I am in favor of constructing the Northern Pass power lines. I would be very satisfied if much of it were constructed underground. Measures should be taken to ensure that the taxes paid on the infrastructure in Franklin provides a continues source of stable funding to the city. My interest is to relieve the historical weakness of the city's tax base. The State of NH should also ensure that the power transmitted provides direct benefits to the state as a whole more substantial than the general improvements to the grid, short-term construction jobs, and special donations to key stakeholders.
