---

Good afternoon,

I would like to express my strong opposition to the Northern Pass project. The project's negative impact on NH is exponentially greater than the rapidly decreasing benefits that Eversource is claiming (and probably exaggerating). We will bear the brunt of the consequences while out of state companies and hedge fund managers reap billions.

Even Hydro-Quebec is hesitating on its commitment, which most likely means that more of the costs of this project will be borne by Eversource rate holders. So not only will we get massive, ugly towers running through the spine of the state, but we'll get to pay for them as well in order to ensure that Eversource's shareholders get their dividends.

I realize that we do need more electric capacity, but this is the worst possible option available. Conservation (which I realize you don't have any control over) is the best approach, and as for capacity, the National Grid proposal will be much less intrusive. Don't let Eversource once again pillage our state for profit.

Thank you,  
Jason Knights
