Subject: Northern Pass - Comments

Dear SEC committee,

I live in East Concord and Yes, I have an easement on my property that Northern Pass wants to use. I own the land and I pay taxes on that land, so I should have a major say in what happens on it.

I would like to point out that Northern Pass representatives are not listening to the people. We want it buried the whole length of the project, not part of it, all of it.

Why spend the time and effort to have all these meetings for the people when Northern Pass doesn't want to do what the people want to be done.

Reps of Northern Pass came to my house to talk with me and I told them I can't stop you from using the easement, but if you are going to move ahead please bury the lines, I don't want to see those ugly towers in my back yard, or any place that I travel and vacation in NH.

It will certainly affect my property value.

Why would we want to import power from another country? What's stopping them from getting approved and then up the cost of the energy? Also, has anyone thought of the circumstances should Eversource go under, or the relationship sour, leaving Canada with complete control?

Who else can Eversource partner with to use my land? Does this open the door to do business with less reputable countries than Canada?

There needs to be a limit on these easements mine was completed in the 1930's.

Northern Pass says they will give money to the towns they will be going through, but I don't get any tax break from Concord for this.

why not give the landowners something as well, after all we are the ones that are affected by this.

Concord's power comes from Until not Eversource so I seriously doubt we will see any difference in our electric bills and why should a beautiful state like NH suffer just to have the power to south of the border.

We trust that you will do the right thing and listen to the people, unlike Eversource and their seemingly unlimited supply of money for PR campaigns. Had they used all the money they have thrown into marketing to "sell" this plan to people, and buy up land they could have buried it twice over by now.

Sincerely,
Charles Dore
