Subject: Northern Pass cuts local renewable power
Date: Friday, July 14, 2017 8:23:13 PM

If Northern pass is built, I want it buried where ever it does not follow existing massive power lines. I oppose this power line for another reason. As I understand it, bringing in renewable energy from outside New England will cut the wattage required by statute to be generated locally. I believe we should incentivise local renewables. There is less loss due to the length of transmission lines and more local jobs.
