I am vehemently opposed to the Northern Pass project for a number of reasons, including the damage it will do to the beautiful landscape of the State. At the very least, it should be buried for the entire length of the line, using existing right of ways.

Most of the energy will not benefit NH, so why allow it to ruin our beautiful vistas.

And since Hydro-Quebec has stated they will not pay for the project, why should American consumers pay so a Canadian company can make millions of dollars from the project.

Please, do not allow this to go forward, and at the very least, insist that 100% of the lines be buried under existing roads.
