---

I would like to express my objection to the current Northern Pass proposal. I believe we we need a regional energy plan in which each state shares the responsibility, consequences, and benefits of solutions for our future energy needs. Under the current scenario, the State of New Hampshire must carry the regional burden by spoiling our pristine views and will derive little long-term benefit.

Locally, if the current proposal progress, in my opinion, I strongly concur with many others that the line should be buried through Concord.
