I am opposed to the so-called Northern Pass project for several reasons. I question whether the environmental impact of the tower construction will damage the area where the building takes place. The unsightly quality of the towers will destroy the natural beauty of our northern forests. This project will probably cost NH ratepayers without providing any direct benefits. Let Massachusetts and Connecticut find other ways to generate sustainable energy on their own lands, such as solar or wind, rather than infringing on the quality of life here in NH.
