Subject: Northern Pass

I am writing to express my support for the Northern Pass Project. With the closures of Vermont Yankee, Pilgrim Power plant in Mass, the future closure of two coal power plants in NH the need for new power sources is greater than ever.

We can not continue to lose sources of energy with no plans to replace lost power sources.

The New England region has the highest energy rates in the country, if this trend continues as it has in the past there will be no hope for industrial or job growth. With out job growth more young people will leave the region.
