Why do you need to pass the Northern Pass if our state will not benefit from any economic, physical or social benefits! Ever-source and the Canadian company are asking a lot from our state. Benefits none – but loss of environmental and economic stability is great. How many states have towers running through its capital city? I keep hearing that our rates will go down, Are they kidding, less than A 5.00 rate decrease is not worth the loss of our tourist business. They are not sure of the health impact to People and/or to our wildlife, The so called job opportunities are very few, limited and for a short time. Many promises that have been made by Ever source and Hydro-Quebec have already been taken back because of cost to their company. Towers are high and ugly and Maintenance could be added to our utility bill. Our state is being used as an extension cord and any safety service will tell you that this method can be expensive a danger to the devices it is servicing. (Loss of service) Our State does not have the ideal weather environment to assure that the towers will need little maintenance.

Hydro-Quebec has identified a few other sites that would be better for our State- these alternatives seem a lot better than polluting our area with unsightly towers!

The committee should take a ride to Montreal and look at the miles of eyesores lining the country side of Canada.
