I'm a big hiker, bicycler, naturalist, and all around outdoors person. I moved from southeastern MA 40 years ago and have never regretted it. That place has turned into a jungle of stop-lights, strip malls, and congestion. I must also say I'm a big fan of renewable energy, in fact we have a 14 panel solar array that powers most of our home usage. I believe hydro to be a great source of clean energy as well, but not at the expense of our scenery. Our natural environment is one of the great assets we have that produce not only our well-being, but a big driver in the economy. The last thing we need is more strips of massive power lines running through the country-side. The fact is, they need to bury the line. I urge you to not approve this project until they agree to something that is so obvious. Thanks for your time and the work you are doing for our state.
