I am a native of Sugar Hill NH. I am currently in the market for property with the goal to return to my hometown. I found no yhe idea of Northern Pass disgusting for a variety of reasons.

- 1) unnecessary environmental damage from building and maintaining the project
- 2) loss of property value adjacent to the project
- 3) significant negative impact of the natural beauty of the state, with concomitant impact on tourism dollars.
- 4) shortsighted way to provide power to the more populous region in MA. In this era of climate change we need to be looking to EFFICIENT, LOCAL, LOW IMPACT power sources

Northern Pass provides no benefit to NH residents, but a great deal of harm. This project sacrifices the land, way of life, and income of NH residents, not to mention those in Quebec affected by the dam. It's a disgusting display of money grubbing disregard for people and the environment and it is a fully illogical way to provide power.
