I have recently moved back to a family home that has been in my family over 100 years. Located in Bridgewater on the beautiful Pemigewasset River that will place me very near where Northern Pass will return back above ground with 150 foot towers looming over the river. I understand the need for planning for our electricity needs of the future, however, this project does nothing to serve New Hampshire. We are simply a conduit for Eversource in Connecticut. Having just lived there for seventeen years, my understanding is that it is only being created to develop an alternative electricity provider Eversource can "sell" to customers. It isn't helping to counter growing electricity needs but to increase profit for Eversource. New Hampshire and it's residents in the path of this horrible project do not need and many of us do not want to see this come to fruition. In a day and age when much of the world is developing wind and solar power it astounds and frustrates me that the power industry is not proceeding with leaps and bounds in that direction rather than continuing to promote rapidly outdated technology of hydro power. I am opposed to this project at every level.
