This project has a plan that will have a devastating effect on tourism forever, but will also cause huge disruption and damaging consequences during the construction phase everywhere in NH. In our north country region as well as Sugar Hill, Campton and the businesses on Main St. in downtown Plymouth Main St. there will be an negative economical impact. Have you driven down Tenney Mt. Highway in Plymouth since the wind turbines were erected in Groton? The extreme height and number of power lines have greatly affected the esthetics of that short road. It is unconscionable to approve this project that gives us no benefit and wrecks havoc with our state's environment. As taxpayers our voices should be heard and respected, not disregarded. Listen, our lives and NH's landscape should be valued. There are other viable choices that will provide CLEAN power. Hydro Quebec gas appeared to embrace greed, not good for NH.
