Dear Pamela Monroe,

This is a deeply flawed project, beginning with the horrific way the body of water was created in Canada. This type of energy production has been proven to be outmoded. So many ways exist to produce power without the visual and environmental destruction that Northern Pass will force onto my beautiful state. New Hampshire is not even getting the power in exchange for the destruction, and the promised jobs are just vapor...the very few that NH residents might be able to fill are for about a year and a half. Plus there is some concern that NH workers do not have the skillset needed. All of this adds up to a very bad, and unnecessary project, built on deception and lies.

As a resident of New Hampshire I hope the SEC will reject Northern Pass's certificate.

Eversource and Hydro Quebec have both said they aren't paying for the project which raises the question whether either of the companies have the financial capability to build and operate this \$1.6 billion project. The transmission towers and lines are going to have a horrible effect on the landscape, historic sites, and the environment in New Hampshire. The transmission line also will not serve our state, as it merely passes through New Hampshire.

I hope the committee will reject this project's certificate to prevent it from harming our state.

Thank you.

Sincerely,  
CherylAnne Williams
