There is already a corridor for these high powered transmission towers and lines through NY/VT. make the company use that corridor for expansion, rather than desecrate our beautiful White Mountains and our communities to the south. We in NH will receive no real benefit from this corridor, either in additional power to our State or jobs in any real numbers. Any statements to the opposite are told us by Hydro-Quebec to persuade us in allowing this abdominal project to go through. It's affects to our environment, our tourism, our beauty, our health, will be significant and irreversible. And definitely something this whole state will come to regret collectively, and regretted by so many even now. Do the right thing for NH and do not allow this monstrosity to occur.
