I am opposed to the building of the Northern Pass through the entire state of NH. The Eversource proposal would erect huge towers in the beautiful north country which would destroy the views for miles around, create large swaths of forest clearing for burial through the White Mountain National Forest which would disrupt and destroy wildlife habitat and have a negative aspect on tourism and the enjoyment of our forest, and erect more monster towers from Ashland to Concord and southward. But the most cynical and disruptive part of this proposal is the route it takes through our towns, the main streets of Franconia, Woodstock and our beautiful, vibrant downtown Plymouth, infringing on the rights of the local people, businesses and their communities! There are alternatives to the revenue losses and business killing of this route through our towns. If this must happen, place the entire pass in buried lines down the center of I-93. There are also alternative methods of creating clean energy and transporting it, as other energy companies have done! I say, no to Eversource and NO TO NORTHERN PASS!
