The proposed Northern Pass Transmission line through New Hampshire has many flaws. A project that was poorly conceived many years ago and has not kept up with technology advancements. If you can't bury the entire line in New Hampshire than New Hampshire is not a viable option for a transmission line. There are other projects like this being proposed in neighboring states where they are able to bury ALL of the line. I do not believe that the local economic benefits of the Northern Pass transmission line are sufficient for you to determined that its construction is in the public interest. Please deny the Northern Pass Transmission project.!
