Dear Pamela Monroe,

People who live in NH and those who visit do so for the quality of life and the environment.

The pristine beauty of the state, in particular the Great North Woods, the White Mountains and the River valleys, draw millions of tourists. All four seasons. This high voltage transmission line will destroy this natural environment. Property values will drop.

Businesses dependent on tourism, one of the state's major revenue sources, will suffer from lost business as will the state, putting more revenue burden on property owners.

Current power lines and wind farms do not have the same impact as this project, due to the monstrous size of the towers being proposed. Proposals to bury some of the line in the WMNF don't take into account the damage done where forests are cut down and access roads are installed, leaving a permanent scar across one of most visited areas.

These are four season areas, affecting business all year long.

NH doesn't need this power nor does this project provide more power to NH, instead sending it to Southern New England. NH is not an extension cord from Quebec to Massachusetts. Vermont has rejected this project for these same reasons. NH will reject this project for what it really is, a corporate profit grab. I will lie down in front of bulldozers to stop it. NO TO NORTHERN

PASS. Thank you.

Sincerely,
Fred DeCicco
