Dear Sirs:

Northern Pass unless buried its entire length will do irreparable harm to scenic NH in the northern part of the state (a considerable draw for tourist dollars). Moreover, as it runs through Concord it would, unless buried, require power lines strung from towers that will be seen from many points existing lines are not thereby further damaging the rural nature of our community. Other projects more sensitive to their impact on local communities are further along. Northern Pass does not serve the public interest as currently proposed and should not be foisted on NH residents to serve the financial greed of large corporations.
