I doubt that I have an argument that is different than all the testimony opposing the Northern Pass than those already expertly presented. All I can say is I hate eyesores and this will be one. Our state is beautiful and the towers will scar the landscape for generations to come. I foresee that it won't be long before this type of energy will be obsolete and we will be left with graffiti laden rusting towers that will be too costly to remove.

In the meantime we are being over powered by a powerful Power company that seems to be leaving the local communities power - less. To me, it's big business versus the average citizen left to fight Goliath. No one is going to want to live near these hideous towers, the general NH populace is not going going to benefit from the Northern Pass, wildlife will be negatively impacted by this project, property values will tank in areas within range of the towers, tourism will decline to areas that have been marred, beautiful old trees will be chopped down leaving potential for erosion, and multiple other destructive disfiguring scarring of our beautiful landscape will occur. As I said, an eyesore, a big ugly eyesore. No Northern Pass.
