Dear Pamela Monroe,

The proposed Northern Pass project is a terrible thing for New Hampshire and New England. At a time when we should be doing more to encourage energy sources such as Solar and Wind to provide more power locally we do not need a big series of towers crossing New Hampshire to bring in power from Canada. I installed solar panels on my roof a year and a half ago and they are providing all the power I need for the entire year. I can not get much more local than my own roof.

Sincerely,  
Christopher Graham
