CommenterWords

I was an intervener for the Industrial Wind Turbines in Errol, New Hampshire. I have been following the hearings for Northern Pass and it appears to be another dogma. It is a project that will place so many in New Hampshire at risk economically and health issues. You know the impact on the environment, the transmission lines on people's health in regard to cancer, The tourist industry, property values. I believe that improper representation by the Attorney for the Public should stop the hearing process until an attorney can be found that will represent the people and not the project. You need to hear from experts regarding the environment, the health risks and property values. So far the people have nor had proper representation. I realize this will go through because it is all about the money. It will decimate the north country and I will seek relief when our property values decrease and our health starts to decline. Respectfully, Kathlyn J. Keene
