As a resident & property owner in Bath, NH I am 100% opposed to Northern Pass. There is no logic in destroying hundreds of miles of New Hampshire to bring power to MA, CT etc., all the way from CANADA. This project will be bad for the enviroment, bad for tourism, bad for the economy. Over the past few years our storms have intensified & Northern NH has felt the affects. Our rivers keep over flowing & causing floods and road washouts. We have had many landslides blocking roads & causing damage. It's the cutting back along the roads and rivers allowing this to happen. We need trees for sucking up the water, holding soil together, fresh air & water, shade, etc. etc.

It will not provide permanent jobs to locals. It will provide work for HQ and Eversource employees. Make these other states, so desperately needing more power, generate it themselves. HIRE LOCAL! These huge corporations should all be going green by now & Northern Pass Project is not "green energy" if it causes damage to the forests, streams and health of those who live around these hight tension towers. NEW HAMPSHIRE IS NOT FOR SALE!!!! With all the other options available, NO PROJECT OF THIS TYPE SHOULD EVERY AGAIN TAKE PLACE ANYWHERE ON THIS EARTH! If this project is allowed, it will open the door for more of it's kind. It will be devistating to New Hampshire!
