### CommenterWords

Residents of New Hampshire have never agreed to allowing the Hydro-Quebec Northern Pass Project to bisect our state. Overland wires are antiquated. Gigantic towers are unsuited to our landscape. The need for this energy does not exist in New Hampshire. We absolutely refuse to become a conduit for energy to be delivered from Canada through our state to the southern New England states. We have fought this idea for 7 years and will continue the fight.

A private international for-profit energy scheme has no place in our small state that is prized for its wilderness & wildlife.
