CommenterWords

I have just learned that the US DOE has overridden the people of the State of NH, in approving a "presidential permit" for Northern Pass. The DOE itself had previously stated that the power lines would:

1. Cause adverse impacts to tourism and recreation.
2. Negatively affect the historic context of architectural resources.
3. Cause impacts to vegetated habitats and land disturbance, impacting archeological resources and wildlife, including protected species.
4. Result in long-term wetlands impacts as compared to the other action alternatives.
