SECDocket	2015-06 Northern Pass Transmission - Eversource
CommenterName	Richard Miller
CommenterCity	Plainfield
DateReceived	11-23-2017

### CommenterWords

According to the U.S. Department of Energy's own analysis, Northern Pass will:

1. Cause adverse impacts to tourism and recreation.
2. Negatively affect the historic context of architectural resources.
3. Cause impacts to vegetated habitats and land disturbance, impacting archeological resources and wildlife, including protected species.
4. Result in long-term wetlands impacts as compared to the other action alternatives.

Still, the DOE has approved a permit for this project.

If facts are not considered part of the evaluation process for this project, then I must conclude that other factors which have not been shared with the citizens of New Hampshire take priority.

If Northern Pass gets a green light, I will lose all trust in our elected State and Federal officials who support this project and conclude that how much money and who gets it was ultimately the deciding factor.
