I am opposed to this project, partly because of the negative impact I believe the towers or the burying will have on our landscape and on our primary income generator - tourism - but also partly because I think the future of power is not these huge projects, but distributed power, generated and used locally. I think giving permission for a poorly planned, destructive project like this will have a chilling effect on smaller, cleaner, less vulnerable local power projects and I believe that is a disservice to all of New England.
