CommenterWords

The numerous arguments against Northern Pass have been clearly and repeatedly documented by innumerable residents concerned about the adverse environmental and aesthetic impacts of the project along with its minimal benefit to New Hampshire. I ask that you add my name to those in vehement opposition to the construction of this monstrosity.

Hydro Quebec has recently capitulated and agreed to bury a section of the transmission line in Quebec in deference to fierce environmental opposition to the towers. It's time for them and Eversource to behave responsibly and bury the entire transmission line.
