Subject: Reaction to the Northern Pass Proposal

Dear Ms. Monroe and members of the Site Evaluation Committee,

As citizens who deeply appreciate and value the natural beauty of Northern New Hampshire, we were shocked to hear of the consideration of building an above ground power line stretching 187 miles into New Hampshire for speculative financial gain.

With no frontier left to explore, we are doubly responsible for preserving our environment for future generations. The situating of these huge towers and the energy they would carry ignores not only the local people, their communities and their love for their state's natural beauty. It also robs visitors of a well deserved respite from their jobs and their burdens through seeking spiritual renewal in nature.

Please know that this instant financial gratification does not respect our stewardship of the natural beauty we are so blessed to have in New Hampshire.

As the world becomes smaller and smaller through accessibility and the population larger and larger, it is imperative that we step up to carry the mantel of conservation and preservation of our natural resources. We urge you to reject the Northern Pass project in this light.

Sincerely,
Steve Frederick (former NH resident)
and
Cherie Jemsek
now both from your sister state 'Forever Wild' New York

"Be the change you wish to see in the world."
