Dear Pamela Monroe,

NH should be setting an example and showing the rest of the country we are serious about the fighting climate change and preserving our wonderful wildlife and forrests. This project would not only damage our natural resources and hurt state tourism in the near term, it will risk slowing the growth of local renewable projects in solar and wind energy - which produce far greener results with faster return on investment. They also keep revenue instate vs. shipping it off to Canada. As a homeowner with 100% of our electricity generated by solar I have seen the benefits of investing in the future instead of trying to squeeze the last few pennies out of the past.

Please scrap this project and invest toward installing solar and wind projects to create 100% renewable NEW HAMPSHIRE MADE energy!

Don't let our beautiful state be scarred by an ugly extension cord for Massachusets!

Sincerely,  
Ryan Wood
