Where.... Is the community consultation on this project? No one wants this. NP has attempted to deceive the public since its publication. It has been appalling to see and even more appalling to see that the people are being blatantly ignored in this. The concerns about misleading "transfer stations" to the impact on our natural environment is overwhelming. We are not interested in having our beautiful state torn up with outdated power lines simply to serve other states and off shore fracking interests in the future. Please take this into consideration.
