Dear Pamela Monroe,

NO NORTHERN PASS - This isn't about energy for New Hampshire. If it was Trans-Canada's and Hydro-Quebec's partner Eversource would have refurbished, restored, and replaced all the old failing poles, hardware, and transmission lines by now, as well as rerouted all the power from New Hampshire's electrical power plants owned and operated by Trans-Canada and Hydro-Quebec already located throughout the state instead of routing that power to Canada and then selling it back to New Hampshire. Northern Pass isn't about energy for New Hampshire, it's about making millions of dollars over 25 years for the Canadian Government, and the Canadian and US rich and wealthy business partners. No one in our Federal Government, our State Government, or Northern Pass Project has seriously taken into account and consideration the first, second and third degree risks, impacts, and action/process causing disturbance, damage, and destruction of countless borderline flora and fauna species, and the already endangered and threatened, and protected by law flora (Sixteen) and fauna (Seven) species that cannot be moved and or migrate thus impacting existence and or destruction of these species. No one in our Federal Government, our State Government, or Northern Pass Project has seriously taken into account and consideration the first, second and third degree risks, impacts, and action/process causing disturbance, damage, and destruction of countless Historical and Archeological sites already protected by law that have not been surveyed, recorded, and listed yet. No one has explained to New Hampshire's citizens and businesses where this power is really going to be transmitted to: The Berkshire Power Grid Facility in Massachusetts where it will be further routed to 14 US States and rerouted back up to 4 Canadian Provinces. No one in our Federal Government, our State Government, or Northern Pass Project has seriously taken into account and consideration the first, second and third degree risks, impacts, and action/process causing change to State and Local laws, regulations, doctrines, organizations, required training and education schemas, required materials, and work personnel and required facilities (Before and after market). No one in our Federal Government, our State Government, or Northern Pass Project has seriously taken into account and consideration the first, second and third degree risks, impacts, and action/process causing change and damage to out-of-doors sporting field, stream, forests, mountain activities, and tourism. No one in our Federal Government, our State Government, or Northern Pass Project has seriously seriously taken into account and consideration and or proffered one of countless alternative routes and possibilities available such as running the transmission lines down one of the already existing Transmission lines of down the Connecticut River corridor. Burying Northern Pass is not an option as our below ground pipeline transmission line safety record is atrocious.

Sincerely,
Stephen Kohler
