Solar and wind power are the generators New Hampshire needs to expand for itself. The proposed project offers nothing to the state but that of creating a horrific scar through some of the loveliest of its land. New Hampshire is a destination state for many who seek the comfort and beauty of undisturbed forests, mountains, streams and lakes. The sky is unbroken by man made power structures in areas the proposal plans to invade. Construction through wilderness areas would be deadly to the habitat for wildlife, and through populated areas it would completely ruin the rural lifestyle people there have sought and conserved. Much of New Hampshire's income is tourist dependent. The proposed project plans to deface areas now attractive for their natural beauty to the state's visitors. There is nothing for our state to gain and very much to lose in this project proposal, which is clear to anyone who cares about the true nature of our state.
