CommenterWords

The governor has stated that he "has no influence" over the SEC's decision to allow the Northern Pass to destroy NH. So would the SEC members please consider that when deciding to listen to the thousands of opponents of this project?

The need for this project has been eclipsed by many other more efficient and effective energy projects (that amazingly, have decent support from the people). The money that Eversource would make on this is only on the backs of its customers, and we already pay way too much for their bad decisions.

There is no turning back our scenery or our land values, once this is approved, and the only ones who can stop it is those who have been sequestered to read and listen to all these comments and hearings. I applaud your patience, and beg you to oppose this project.

Please, deny this application because the governor says he has no say on this matter, and the vast majority of NH residents who will be forever impacted, are begging you to deny a permit to the Northern Pass.

Thank you.
