Dear Ms. Monroe-My wife Carolyn and I are strongly opposed to the Northern Pass project as presently proposed by Hydro-Quebec and Eversource. As described, it has little or no public benefit for the residents of or visitors to the State of New Hampshire. Power lines must be buried (Interstate 93?) to largely eliminate the negative impact. This impact will significantly affect tourism, recreation, transportation routes, farming activity, second residential property owners and other business types. As an historian and author of books on New Hampshire architecture and historic preservation, I am deeply concerned about the building culture that Northern Pass, as presently outlined, would severely damage. I urge the Site Evaluation Committee to consider and adopt a re-vision to the current plan that would preserve New Hampshire's present life and rich heritage. Sincerely yours, Bryant F. Tolles, Jr. (39 Dwinell Drive, Concord, NH 03301)
