Subject: Against Northern Pass
Date: Tuesday, December 19, 2017 10:28:18 AM

Towers will scar NH landscapes, including those in Coos County.

Burying lines along Routes 18, 116, 112, and 3 will have a negative impact on the tourist industry. Small businesses will suffer while the Project digs up the main streets of NH towns.

There are other projects that can bring Canadian renewable energy to southern New England without destroying NH's natural beauty. Northern Pass has been estimated to save the average ratepayer in NH \$18 per year on their utility bills, while Granite State Power Link has estimated its cost savings for average ratepayers to be \$21 per year.
