---

I am writing to you as the SEC Administrator with regard to deliberations on the Northern Pass project currently under review. I am writing to express my opposition to the project as currently proposed, and my hopes that the vast amount of grief, misinformation or lack of professional planning that has been imposed on the residents of New Hampshire for the past 7 years will convince the Commission that Eversource is not the proper company to handle this project. Originally sold to the public as a project that will be paid for by Hydro-Quebec, we now find out that the Canadian partners have no intent on paying for construction in the US, and that the cost of any burial on Canada will be passed on to the American customers. We were originally told that burial was economically and impractical, yet other firms are burying their lines and still project massive profitability. The project ignores the advanced technology available today to mitigate environmental and economic impacts in order to maximize profits at the expense of the citizens of New Hampshire, and those costs will be with us for decades to come in one form or other.

Please reject this project as proposed.

Thank you

James White
