Northern Pass in it's current form is detrimental to NH. It should be fully buried or not be constructed. The power line tech they want to employ is old fashioned, inefficient from a maintenance perspective, and visually intrusive.

Even if it was buried, I'm not sure I'm sold on HydroQuebec's actual ability to deliver power reliably nor it's claim to be "green" and "renewable." There are many documented issues with Hydroelectric power and I don't think a transmission project to deliver power from such a source is the proper solution to combat the growing energy demand while preserving the environment.

No northern pass.

Thank you,

Terry Hyland
