Most decidedly NO! This project is not good for NH. NH is already an exporter of excess electric power. This is a for-profit project brewed in the board rooms of HydroQuebec, which has shown no compunction about raping the landscape of their own province. How much less consideration will our beloved State receive from them? And were it not for our geographic location as a necessary extension cord to the power markets in MA and CT, and were our largest power supplier not a subsidiary of Northeast Utilities in CT (do you realize that CT has legislated against the very type of towers they are so eager to erect in NH.), we would not be dealing with this issue.

Please represent and advocate for NH, not HQ, NU, MA and CT.

Thank you. Thomas Bearor (USAF RET) and Mary Bearor
