The whole concept of Northern Pass bringing high voltage wires through Central New Hampshire is fraught with problems. Aside from the tremendous negative impact on our environment, it will change the entire profile our state and open the door to further degradation of our natural ecosystems. It will negatively impact our main source of revenue, tourism.

The process of putting wires underground will wreak havoc with our local businesses and impaired their ability to sustain themselves. All this will cost for more than any possible short-term games in terms of jobs. The state of New Hampshire will have no possible benefits from this project at a time when the state desperately needs Revenue sources. There's not one positive logical reason why this project should be approved it only pads to pocket of those who are directly invested in Northern Pass.
